

AYUSH MISHRA

Software Developer (Fresher) | OOP | Data Structures & Algorithms
Greater Noida, Uttar Pradesh | ayushmishra28114@gmail.com | github.com/Ayushm28114

PROFILE

Fresh Computer Science graduate with strong fundamentals in **Object-Oriented Programming and Data Structures & Algorithms**, built through academic coursework and applied in real projects using Python and Java. Experienced in **designing algorithmic logic, debugging, and end-to-end troubleshooting** while building production-style backend systems with Django REST Framework - including a caching solution that cut API latency by **80%** on a live project. Comfortable with the full software development lifecycle, from problem analysis and design through testing and deployment. Primary hands-on language is Python; eager to apply and deepen core CS fundamentals in C++ on the job.

KEY SKILLS

- **Object-Oriented Programming:** class design, encapsulation, inheritance - applied in Python and Java coursework/projects
- **Data Structures & Algorithms:** arrays, stacks/queues, hashing, sorting; applied algorithmic logic
- **Problem-Solving & Debugging:** root-cause analysis, systematic troubleshooting across backend and integration issues
- **Software Development Concepts:** SDLC exposure, version control (Git/GitHub), code review, unit testing, CI/CD
- **Languages:** Python, Java, JavaScript (ES6+), SQL - core programming fundamentals transferable across languages
- **Databases:** PostgreSQL, MySQL, MongoDB - schema design and query optimization
- **Soft Skills:** analytical thinking, clear communication, teamwork, adaptability in fast-paced settings

PROJECTS

AnimeVerse - Full-Stack Web Application | *Python, Django REST Framework, PostgreSQL, JWT, React.js*

- Designed OOP-based backend models and a review/voting system (likes, replies, favorites), applying class design and data structure choices to keep the logic clean, testable, and well-documented.
- Engineered a server-side caching layer that cut external API latency by 80%, working through algorithmic and performance trade-offs to solve a real efficiency problem.
- Debugged and resolved data consistency and integration issues connecting the backend to a third-party API (Jikan), strengthening systematic troubleshooting skills.

Crypto Trade Calculator - Real-Time Hackathon Project | *Python (calculation logic), React, TypeScript, CoinGecko API*

- Designed and implemented FIFO-based gain/loss calculation logic with CSV/TXT export - a direct application of data structures and algorithmic thinking to a real computational problem, built under hackathon time pressure.
- Shipped and maintained the application via Vercel with CI/CD, independently debugging deployment issues end-to-end.

EDUCATION

Bachelor of Technology, Computer Science and Engineering - Noida Institute of Engineering and Technology, Greater Noida, UP · 2022-2026

Senior Secondary (XII), 89% - Aster Public School, Noida Extension, UP · 2022

CERTIFICATIONS

- JavaScript Essentials - Infosys
- ReactJS - Infosys
- Blockchain Basics - The State University of New York

LEADERSHIP & ACHIEVEMENTS

Team Captain, Infinity Loop | *Hackathon Team Lead*

- Led a competitive hackathon team across events including Smart India Hackathon, driving technical strategy, code-level decisions, and task delegation under deadline pressure.
